#### **DETAILED ACTION**

#### Election/Restrictions

This application contains claims 57-65, drawn to an invention nonelected without traverse on 6/23/2004. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

### Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 27 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The use of "large" in this claim, is found to be vague and indefinite because it is unclear as to what would constitute "large". Clarification is required.

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

Art Unit: 1744

Determining the scope and contents of the prior art.

2. Ascertaining the differences between the prior art and the claims at issue.

3. Resolving the level of ordinary skill in the pertinent art.

4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 18-33 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nablo U.S. patent No. 3,780,308.

Nablo teaches method and apparatus for sterile filling of packages with low energy electrons on the order of 50 to 150 keV. Sterile containers are provided to a sterile, isolated area constructed to contain e-beams therein, where a filler spout is maintained in aseptic condition and the package port and filler spout are irradiated during filling with the electrons. An activated gas can also be created in the region utilizing UV-rich gas such as xenon. After sterile filling is complete, the packages are sealed and conveyed away. The process is automatic and can be performed repeatedly. See column 5, line 60 through column 6 and the claims. Nablo is silent as to the material for filling the packages, but it would have been well within the purview of

Art Unit: 1744

one of ordinary skill in the art to determine that this system is applicable to fluids as a filler "spout" is employed and as sterile filling of fluids is particularly well recognized in the art.

### Response to Arguments

Applicant's arguments filed 9/23/2004 have been fully considered but they are not persuasive.

Applicant argues that Nablo does not teach filling the port of the pre-sterilized container while "in the active sterile field", however, the Examiner would disagree. Applicant argues that "zone 4" of Nablo is not an active field and that only the dispensing port is maintained within an active field during filling, and that the container moves through an inactive field during transfer from head A to head B. First, the Examiner would point out that Applicant claims a "pre-sterilized container", and Nablo is "pre-sterilizing" his container at head A, not filling the container. Secondly, the Examiner would assert that "zone 4" is cleary and definitely maintained as an active field, and she would point Applicant to column 5, lines 60-68 where Nablo specifically recites an ozonated atmosphere prevailing in zone 4, or another gaseous irradiation. See also column 6, lines 60-68 and column 7, lines 4-10. The Examiner would further point out that the entire zone is taught as being shielded, a step only necessary if the entire zone is active (see column 6, lines 49-52). Finally, the Examiner would maintain that Fig. 5(b) and the corresponding citations above clearly set forth the placement of the filling port within an active field during the entire filling process.

Art Unit: 1744

#### Conclusion

It is noted that Applicant submitted and IDS copying that in parent application 09/294,964, however, that case is currently unavailable to the Examiner, so only those US references cited were considered.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krisanne Jastrzab whose telephone number is 571-272-1279. The examiner can normally be reached on Mon.-Wed. 6:30am-4:00pm and alternate Fridays.

Art Unit: 1744

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert J. Warden can be reached on 571-272-1281. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
